

SFDC24 + Blackboard - current operating architecture

Evidence-bound snapshot through 25 Sep 2026 12:56 UTC: what is live, what was rehearsed, and what is still held

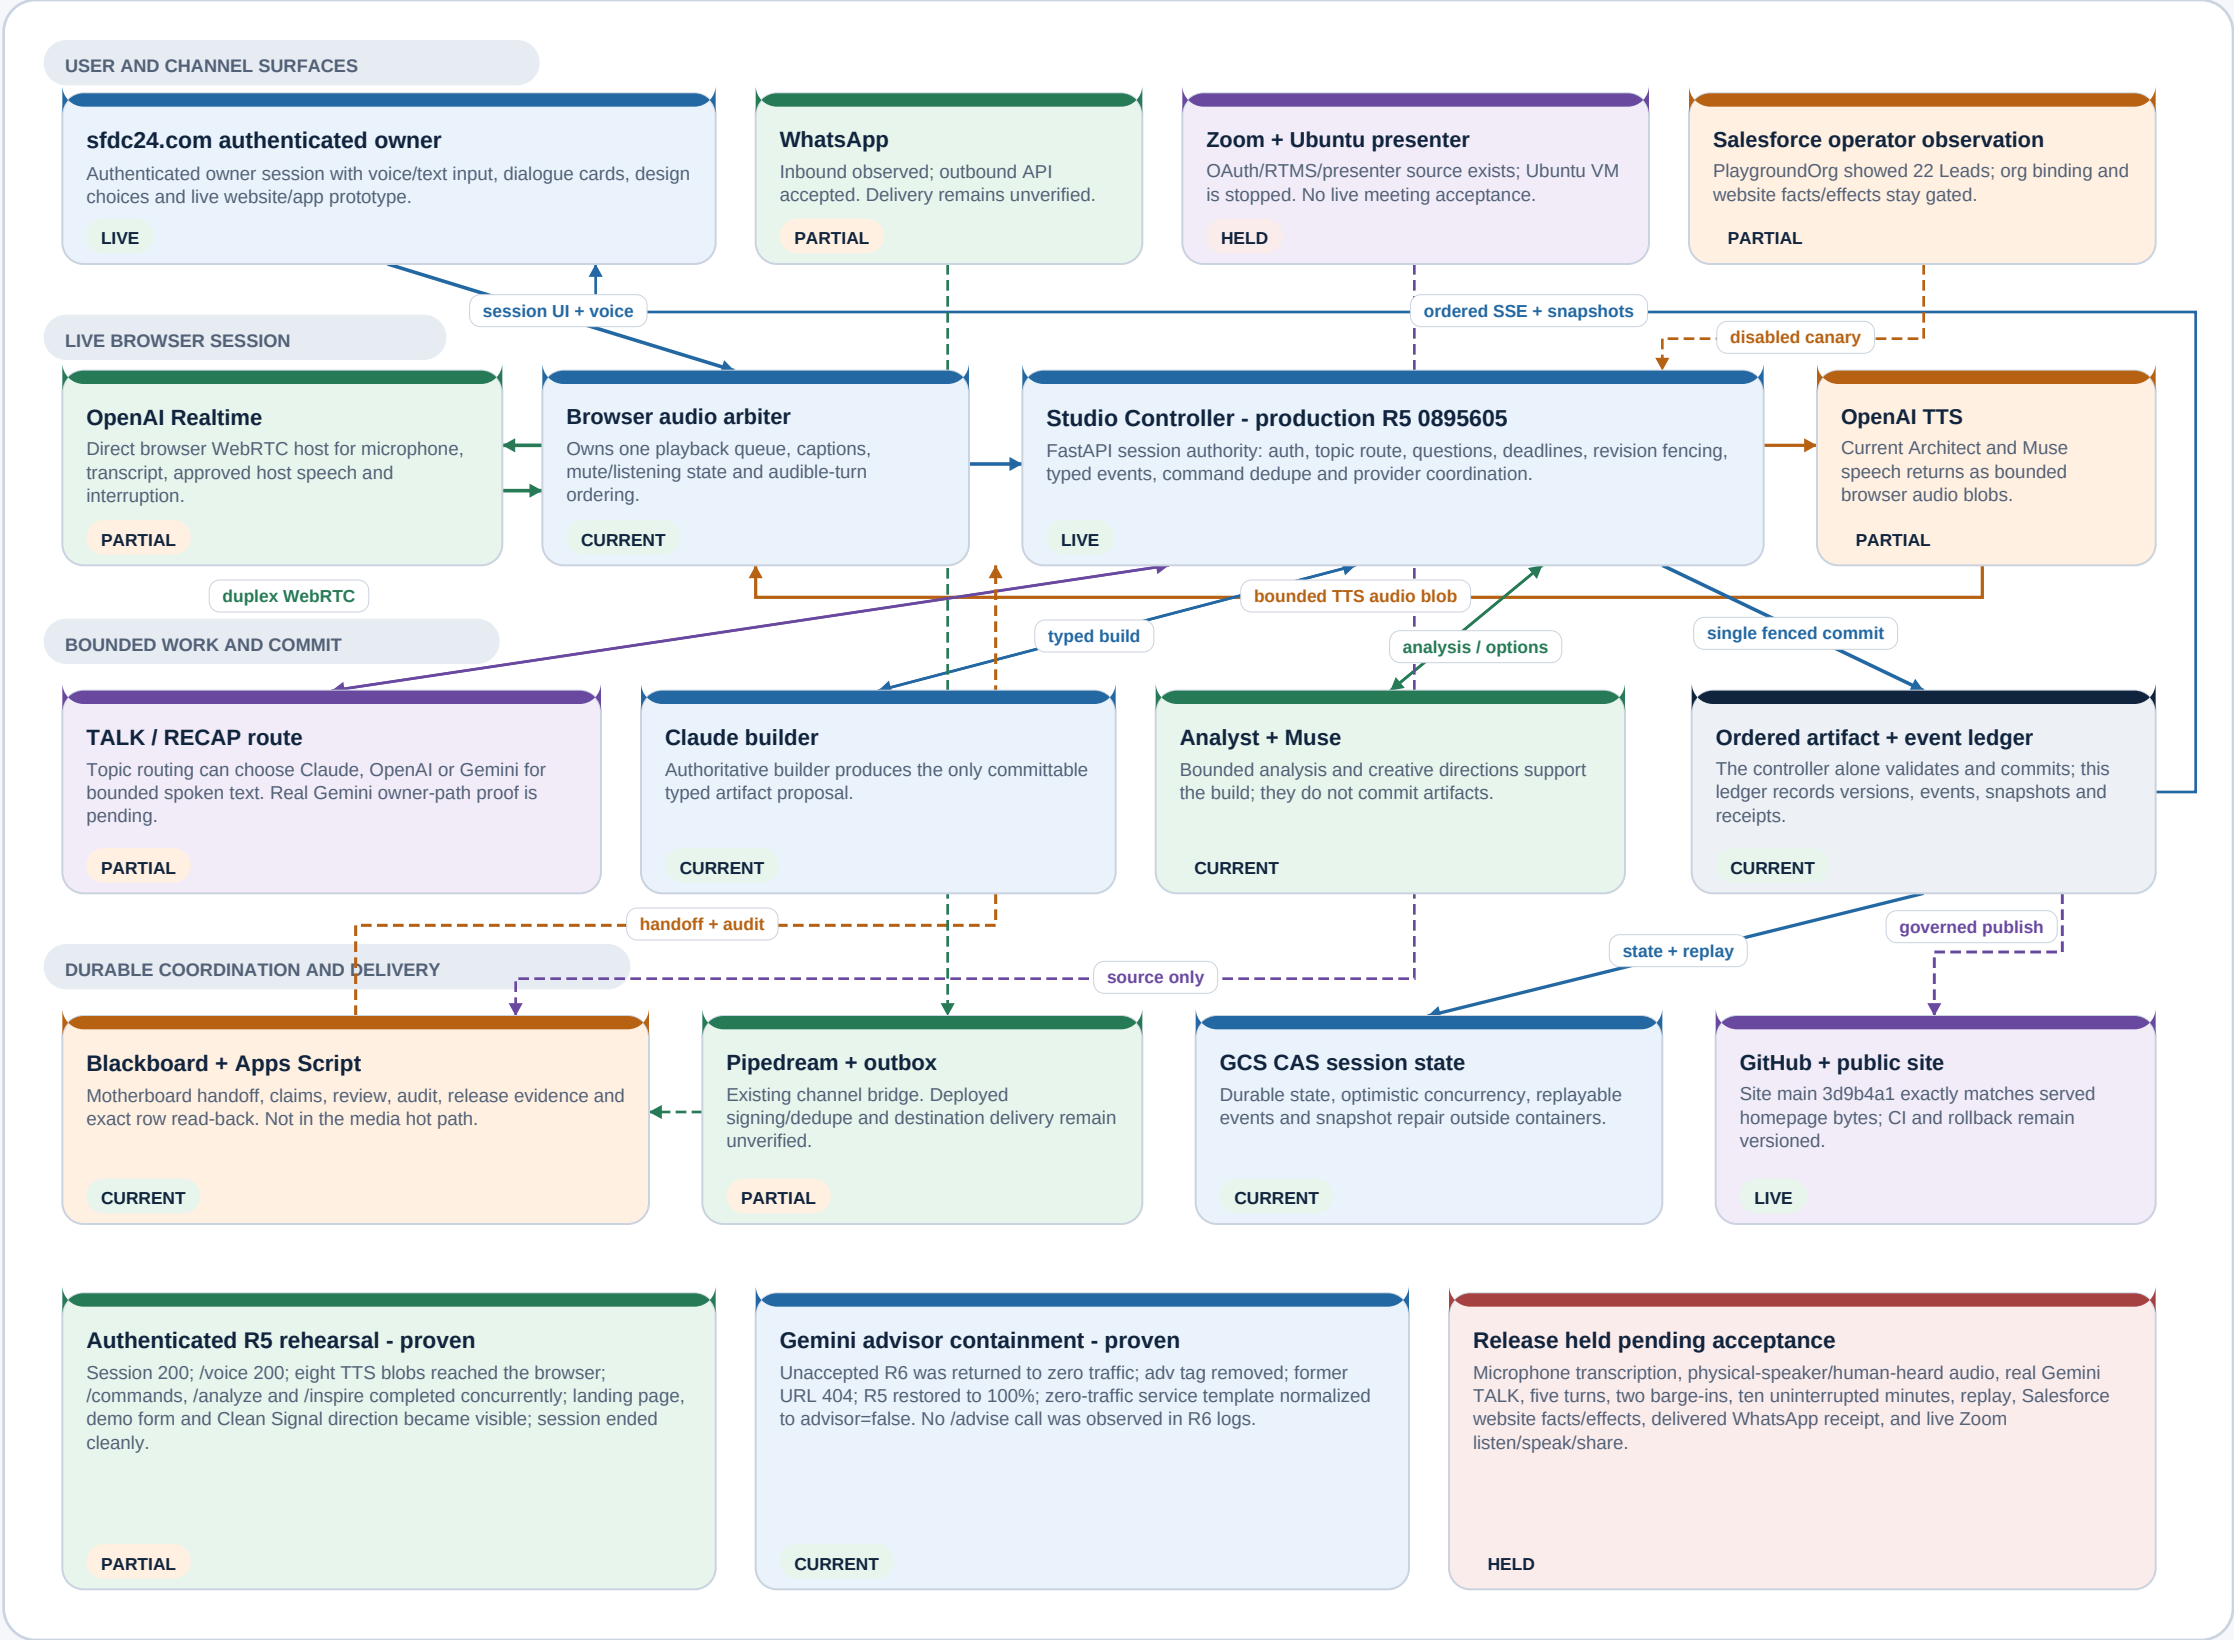

CURRENT STATE

PRODUCTION CONTAINED
R5 serves 100%; advisor tag removed; next template is advisor-off

ONE AUDIO ARBITER
Realtime host plus queued TTS; one serialized audible turn

ONE ARTIFACT WRITER
Parallel lanes propose; the controller validates and commits

EVIDENCE LEVELS STAY SEPARATE
Source, served bytes, provider success and E2E are distinct

Current technologies and why

LIVE serving; CURRENT present; PARTIAL bounded proof; HELD disabled/frozen; TARGET future. Foundry excluded; Meta optional/off.

LIVE	GitHub Pages + typed browser UI Fast versioned delivery of dialogue, prototype and release surfaces.
LIVE	Cloud Run + Python/FastAPI Managed controller runtime, TLS, bounded API surface and rollback revisions.
PARTIAL	OpenAI Realtime WebRTC Lowest-hop browser conversation path; full microphone/audio acceptance remains open.
PARTIAL	OpenAI TTS Female-capable natural speech for non-host lines through the browser queue.
CURRENT	Claude builder Single authoritative artifact proposal keeps revisions deterministic and reversible.
PARTIAL	Gemini topic route Fast alternative TALK/RECAP provider behind the same controller policy.
HELD	Gemini advisor Merged source is quarantined; hardening, exact-head review and a real dark probe are required.
CURRENT	GCS CAS + event ledger Persistent session state, revision fencing, replay and reconnect repair.
CURRENT	Blackboard + Apps Script Durable multi-agent command, evidence, handoff and audit plane.
PARTIAL	Pipedream + WhatsApp API Existing mobile bridge; delivery/read receipts require separate proof.
HELD	Salesforce APIs Business/customer-success engine; public facts and effects remain gated.
HELD	Zoom RTMS + Ubuntu presenter Correct split between media observer and real meeting participant; not accepted live.

SFDC24 + Blackboard - future governed minibus architecture

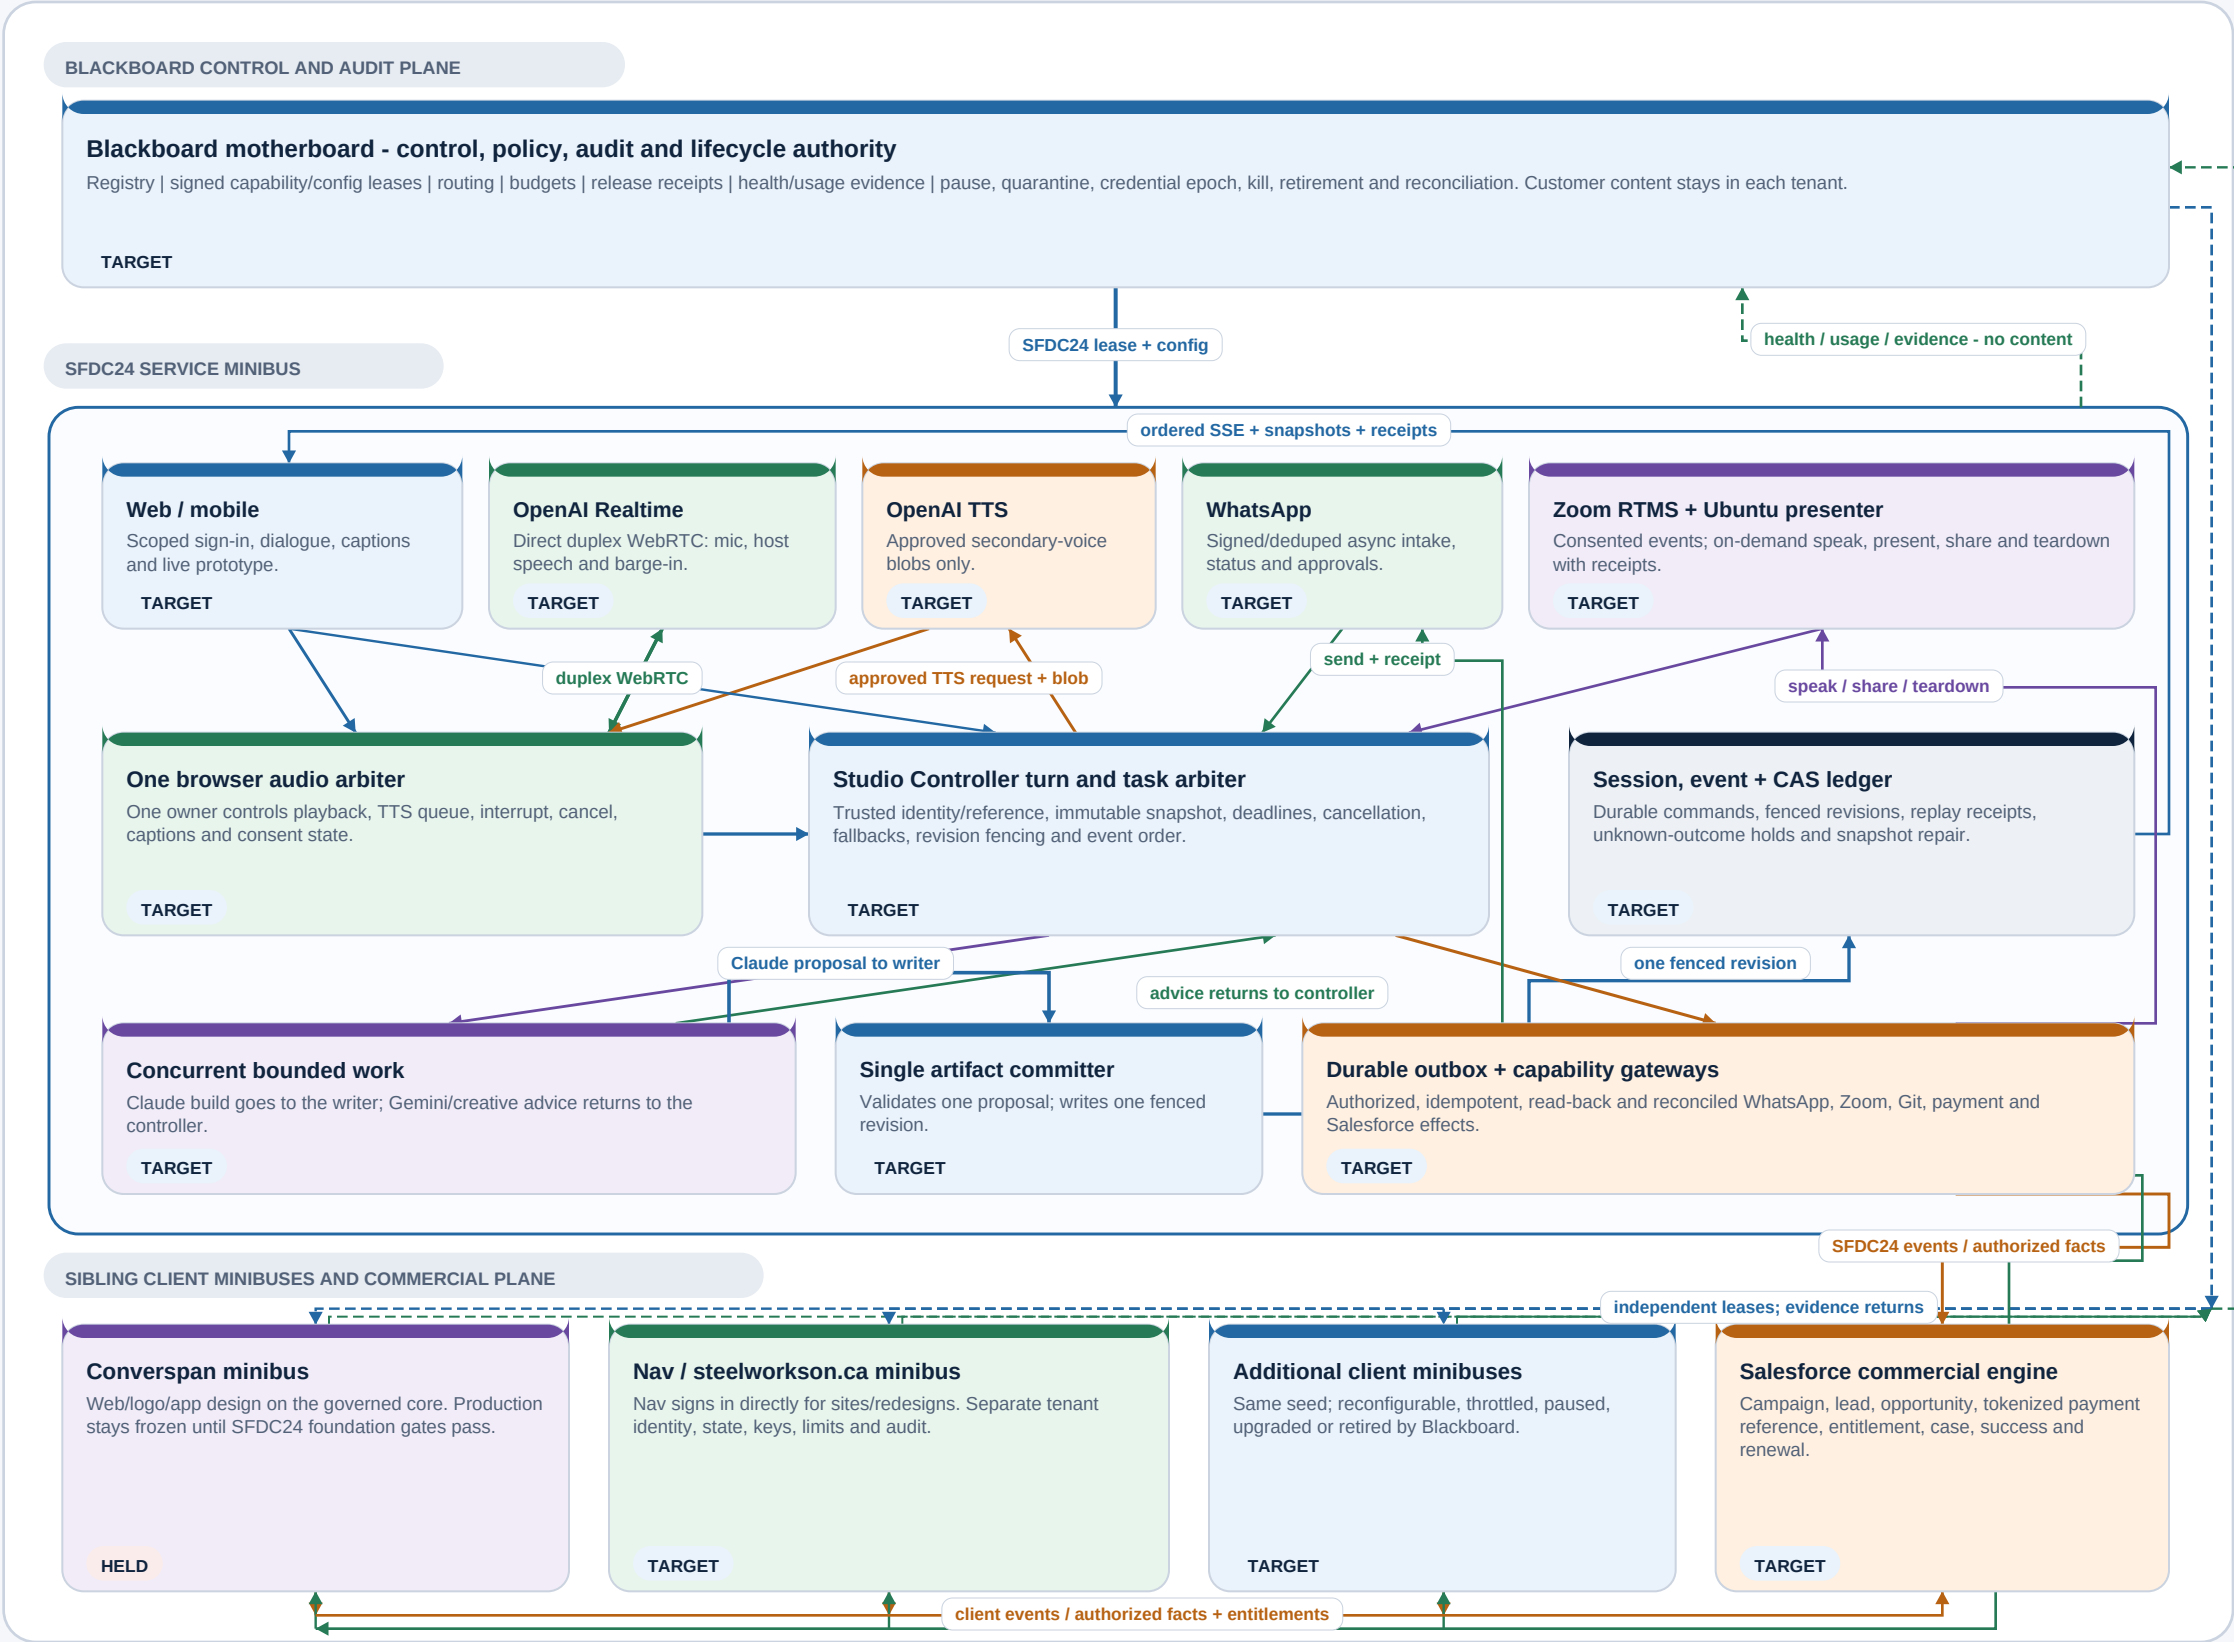

Blackboard stays the motherboard; SFDC24, Converspan and client minibuses inherit bounded capabilities and remain revocable

MOTHERBOARD COMMAND
Registry, leases, policies, budgets, evidence, pause and kill stay central

SEAMLESS PRESENT MOMENT
Audio, dialogue cards and live prototype revisions share one turn timeline

MULTI-AGENT, SINGLE COMMIT
Claude builds; Gemini advises; controller validates and commits

SFDC24 FIRST
Converspan production waits for audio, isolation, durability and rollback gates

Selected future stack and why

TARGET means selected future architecture, not deployed or accepted. Choices favor speed, safe autonomy and reversibility.

TARGET	Email OTP + scoped session tokens Target passwordless entry; OIDC-compatible boundary when external identity is selected.
TARGET	WebRTC + OpenAI Realtime Direct low-hop host audio, captions and barge-in; short-lived server-minted access.
TARGET	OpenAI TTS + one audio queue Welcoming secondary voices without competing playback authorities.
TARGET	Cloud Run + FastAPI controller Managed TLS/scaling with deterministic session and commit authority.
TARGET	Typed JSON + DOM/SVG Fast, crisp and accessible live prototypes; no model HTML, script or eval.
TARGET	Claude builder + Gemini analyst Parallel specialized value while only one validated proposal can commit.
TARGET	GCS CAS + durable outbox Durable replay, revision control, effects, restart recovery and reconciliation.
TARGET	Blackboard signed leases Central capability ceiling, budgets, rewiring, revocation and sub-60s connected kill target.
TARGET	WhatsApp + Pipedream Low-friction mobile status/intake outside the continuous-audio path.
TARGET	Zoom RTMS + Ubuntu presenter Backend observer plus on-demand participant for speech, presentation and screen share.
TARGET	Salesforce as CRM/success One attribution and customer-success spine across domains and client minibuses.
TARGET	Payment-provider boundary (TBD) Provider owns checkout/card data; Salesforce stores tokenized commercial references only.

Non-waivable launch gate

No Converspan production onboarding until SFDC24 proves continuous audio, artifact replay, tenant isolation, durable effects, source-to-runtime identity and rollback.
