

One room. A coordinated team.

Talk with four named AI participants, share the working board, and turn decisions into assigned work.

BUILT FOR CONTINUITY

One room epoch + turn IDs; a speaking lease blocks duplicate playback. Shared-board edits have a real database receipt. The diagram is a target; provider and human-heard acceptance come from the live POC.

EXTENSIONS WITHOUT BLOCKING THE FIRST CALL

Canadian phone number via SIP after browser acceptance. Zoom + the Ubuntu meeting presenter remain separate bridges. Salesforce reads are governed; confirmed writes remain a later capability.

Build one useful slice, then extend it.

Code starts after this PDF is delivered and package owners acknowledge this version. Claude integrates and releases.

OWNER / PACKAGE	EXCLUSIVE CODE BOUNDARY	FIRST DELIVERABLE + INDEPENDENT REVIEW
Claude / WP1 + WP2	chair/ + gateway/ + integration	Floor + two provider voices; owner tokens and private room. Review: Codex + Cursor.
Cursor* / WP3	console/	Join, real audio, screen share, dialogue cards and live board. Review: Claude + Codex.
Codex / WP4	broker/ + architecture contracts	Yjs sync, fenced Firestore save, context and outcome receipts. Review: Claude + Cursor.
Claude / WP5	sip/ - after browser POC	SIP + Canadian number + authorized caller entry; separate account gate. Review: Codex + Cursor.
Grok / WP6	personas/ - Claude commits data	Persona style cards, agenda and roundtable cases. Grok is content owner; one repository writer.
Gemini + Copilot	Review channels; no product folders	Gemini: multimodal, latency and failure review. Copilot: PR review. Model opinion is not test evidence.

All paths under cloud/conference-line/. One writer and worktree per package. *Cursor acceptance required; Claude records any ownership transfer before edits.

THE POC MUST PROVE

20-minute owner + four-persona call; warm introduction; 10 addressed exchanges; 2 roundtables; 2 barge-ins; zero overlapping AI speech. Share a screen, change a board card, reconnect, restart the broker, and read the saved revision back in two clients. Close with approved decisions and one receipt per destination.

Measure: response p50 <1.5 s / p95 <3 s (targets), interrupt stop time, board-save time, provider usage. End closes mic, providers and pending work.

SEQUENCE + ACCOUNT DEPENDENCIES

0-4h: same-version ACKs, access and contract freeze. **4-12h:** real two-agent room + shared board. **12-24h:** four agents, screen context and owner rehearsal. Working-hour targets after prerequisites; Claude confirms integration ETA.

Cost: LiveKit Build starts at USD 0/month. Illustrative 20-min session subtotal: USD 0.80 for 4 agent sessions + USD 0.13 shared Flux. Excludes models/TTS, transfer, GCP and phone. Keys in Secret Manager; no paid upgrade selected.

Privacy: work saves approved content; social/confidential are ephemeral. Cloud providers still process media. [Pricing](#) / [quotas](#) checked 27 Sep 2026 UTC.
